Flexographic, offset and sublimated items require a different ink system than is used for screen printing. Colors shown above are only an approximate reference. Flexographic neon colors are noticeably lighter than samples shown above. Neon and Metallic inks are not available on offset or sublimated items.

Standard screen printing colors are glossy, but the actual finish may vary depending on the material on which they are printed. Slight variations in our standard colors may occur.

No color match charge is applied for standard colors. If a PMS® number is specified or color sample matched, there is an additional charge of \$39.00. Perfect color matches are **NOT** guaranteed.

* PMS® colors indicated are not an exact match to our standard colors. They only show the closest PMS® color.

** Neon colors will begin to fade in thirty days if exposed to prolonged sunlight. They are not recommended on a clear or light colored backgrounds. A dark background is suggested for better readability.

Yellow vinyl is a pigmented material. It is not the same color as No.10 or No.12 Yellow. If a decal is wanted with No.10 or 12 Yellow as the background, the background will be printed and charged as a separate color.

Note: These colors are not for the use on Reflective Decals, which are printed in transparent inks. Transparent inks available are red, blue, orange, green, yellow, purple, magenta, teal and gold. Color matching is not available for transparent inks.
